

**2009 NEBRASKA STATE FAIR PORK CARCASS RESULTS**

Attached are the pork carcass results from the 2009 Nebraska State Fair. Carcasses are ranked on percent lean, which is composed of tenth rib fat thickness and loin muscle area measured by ultrasound and hot carcass weight measured after slaughter. Percent Lean was calculated using the prediction equation from NPPC "Pork Composition and Quality Assessment Procedures," 2000. This equation estimates the pounds of standardized fat free lean. The averages for the carcasses in 2009 as compared to 2008 were:

|                       | 2009   | 2008   |            |
|-----------------------|--------|--------|------------|
| Live Weight:          | 276.3  | 267.1  |            |
| Hot carcass wt:       | 212.1  | 206.2  | lbs        |
| Carcass 10th rib fat: | 0.70   | 0.55   | inches     |
| Loin eye Area:        | 8.30   | 8.59   | sq. inches |
| Percent lean:         | 54.440 | 56.852 | percent    |

Ribbon awards are based on the following:

- Purple: 57.00 % Lean or more,  $\geq 0.4$  inches 10<sup>th</sup> rib backfat, <10.0 sq. inches loin eye area, and 175 to 215 Hot Carcass Weight.
- Blue: 55.00 - 56.99% Lean,  $\geq 0.25$  inches 10<sup>th</sup> rib backfat, and 167 to 229 Hot Carcass Weight.
- Red: 53.00 - 54.99% Lean, 160 to 240 Hot Carcass Weight
- White: 52.99% Lean or less, and carcasses failing to meet carcass requirements

Payment of the hogs was based on the lean buying program by Hormel Foods. A special thanks is extended to the Hormel Foods of Fremont, Nebraska for slaughtering the pigs. Also, appreciation is expressed to the Nebraska SPF Swine Agency for ultrasound scanning.
